Art Unit: 1771

1. Claim 4 recites the limitation "the conjugating fiber" in line 2. There is insufficient antecedent basis for this limitation in the claim.

2. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

3. Claims 1-7 are rejected under 35 U.S.C. 103(a) as being unpatentable over DE 4,243,012 to Boich et al, (abstract) in view of Pike, U.S. Patent No. 5,935,883. Boich et al discloses a material comprising an elastic layer which is elastic in at least the y-direction and an inelastic web of fibers intermittently bonded to the elastic layer. Boich et al differs from the claimed invention because Boich et al does not disclose that fibers having a ratio h/w of less than 0.5. Pike discloses that employing conjugated splittable fibers which may be split by high pressure water jets as the fibrous layer in film/fabric laminates enhances the softness, uniformity, and barrier properties of the laminate. The laminates are particularly suitable for use in applications which will contact skin such as diapers, etc. It would have been obvious to one of ordinary skill in the art at the time the invention was made to have employed the particular fibers of Pike as the inelastic web of Boich. One of ordinary skill in the art would have been motivated to employ the fibers of Pike in order to obtain the improved properties set forth above in the finished laminate. The fibers of Pike would meet the requirement of h/w is less than 0.5.
